Reduce the risk of fogged lenses with our 'Thermal Lens Wraps'. Offers Insulation and a slow release of warmth for your lens

Using our Thermal lens Wraps© reduces the risk of condensation or frost building up on your lens while taking remote or long exposure photos.

Adjustable fit to suit a range of lenses

For full weather protection our 'All in One' Camera & Lens covers Code C80R can be used together with our Thermal Lens wraps

Our 'Thermal lens wraps' Code C63 combined with our C40.7 heat pads offer a slow release of warmth combined with the insulating properties of the Lens wrap. The Lens wrap has an outer cordura waterproof layer, foil insulating layer and a double layer of fleece for the two heat pad pockets. Depending on the conditions the Lens wrap can be used on its own for insulation or with one or two heat pads inserted. The heat pads are the size of a tea bag and offers up to seven hours of slow release warmth.

One pack of our C40.7 heat pads are included with our Thermal lens Wrap but more can be ordered separately

Photo shows the middle insulating layer of foil sewn in between the outer cordura layer and the fleece pockets
